TaylorMade R7 Limited Driver In 2004, TaylorMade introduced Movable Weight Technology in a seminal driver called the r7 quad, which gave golfers the ability to move weight in the driver head to promote changes in trajectory to gain greater distance and accuracy. It was followed by the r7 425, the r7 460 and r7 SuperQuad, drivers whose groundbreaking performance fueled record popularity among tour professionals and recreational players alike. Now, TaylorMade has unveiled the next driver in the r7 lineage, the r7 Limited, which promotes a change of 35 yards, and does so with only three weights weighing 16-grams, 1-gram and 1-gram. The r7 Limited also incorporates a new, modern and beautiful clubhead shape. Reminiscent of a triangle, with soft corners for a pleasing appearance, the head is faster-looking than any r7 driver head before it, and the address footprint is exceptionally large, giving it a substantial and confidence-inspiring appearance while deeper, lower CG promotes better launch conditions for even more yardage. It is also equipped with a new high-performance 60-gram graphite shaft, the Matrix XCon 5.5 MOI, which incorporates a stability-enhancing weave that extends from the butt to the middle of the shaft. The XCon 5.5 MOI is specifically designed to work in conjunction with today's larger, high-MOI driver heads to reduce twisting when contact is made toward the toe or heel.
