

## NEW TITLEIST 909D DRIVERS

Titleist has launched a couple new drivers for 2009. They are beautiful clubs and come in two different designs. The first is the Titleist 909D Comp Driver which has a new shape that reduces spin and keeps you in the fairway more by creating a deep and low center of gravity. It has a composite crown that lowers the CG also and allows a high launch off the face. It has virtually no vibration with a solid feel created by a curved sole and internal rib design. The second club is a Titleist 909D2 Driver which has a "CNC milled face" that is thicker and creates greater ball speed. A up-to-date shape creates little spin and allows for a straighter drive by lowering the center of gravity. A solid feel is created by the titanium hosel.

The 909D Comp Driver comes with the Titleist OZIK Xcon-5 or Xcon-6 Graphite shafts for only 9.00

The 909D2 Driver comes with the Titleist Diamana Blue 65 or Titleist Aldila VooDoo Graphite shafts for only 9.00 VISIT [www.equippedforegolf.com](http://www.equippedforegolf.com) TO VIEW THIS ITEM AND MORE.
